

Top features

to elevate your LMS

noun:

LMS is short for learning management system, a platform that delivers, tracks and hosts training. As well as providing an LMS, the Charity Learning Consortium also offers eLearning and events to 350+ non profit organisations.

A learning management system (LMS) is **so much more** than just a platform to host online learning.

It allows you to inspire and engage learners on a daily basis. With all these features and functionalities, you can do just that!

Did you know?

1,000,000+

staff and volunteers are active across our platforms; learning, engaging and developing their skills every day.

Blended learning

Courses that we offer via the LMS can include videos, eLearning, PDFs, documents, feedback tools, surveys, quizzes, workbooks, fact sheets, handouts, infographics, certificates, badges and much more.

Dynamic hierarchy

Within the LMS you can assign learning content according to users profile fields, this is unlimited and you can input your entire organisational structure. For example, department, sub-department, office, location etc.

On top of this, managers can report on their teams, authorise classroom/webinar sessions and create learning pathways.

Face to face/classroom session booking tool

This tool simplifies the administration that goes into organising an event. Create online or in-person events for users to book on to save on administration time! Calendar invites and reminders are automatically sent to delegates and you can report on attendance too.

Learning data store

Import learner data from any source, like spreadsheets, or a LMS that you've previously used. This means that you can keep all of your learning records in one place. Historical data can be useful when checking compliance or creating learning pathways.

Learning Pathways

Learning pathways are a collection of activities, resources and/or courses which are presented to a learner to complete. Using learning pathways makes it much easier for your learners to know what they need to do and when they need to do it. Pathways also give managers and administrators an easy overview of learners' progress.

Mandatory allocation via Learning Pathways

Mark learning pathways as mandatory to enable 'negative reporting'. You can then easily see which of your learners haven't completed the mandatory courses assigned to them.

Notifications

Automated notifications are delivered to learners, both in the platform and to their email. For example, whenever they're allocated a new pathway, have a deadline looming or when training needs to be refreshed. Managers and administrators can also create personal messages to nudge learners whenever they want.

Personalisation

Administrators can change the branding, logos and login pages on their LMS.

Personal Development Log

The Personal Development Log enables users, managers, and site administrators to log, review, and recommend training resources. Users can input any additional training required, suggested, or planned within the log. Managers and site administrators have the capability to monitor, modify, and validate the development records recorded by learners.

Self enrolment

Learners can manually enrol themselves onto courses that they are interested in.

Renewals and completions

Do you have courses that need to be completed annually or every two or three years? Renewals lets you automatically remind learners, via email, that compliance courses need to be completed again. Administrators can also easily see who is compliant or not.

Please note that previous compliance can also be reported on.

Reengagement

Do your people sometimes need a little extra nudge? The reengagement feature provides a way for you to remind learners to return to a course and complete activities. Notifications are sent via email, as often as you require, once someone has started but not finished a course. You can also use this plugin to drip feed timed content.

Reporting

Reporting can be filtered by any additional fields which have been added to a user's profile (e.g. department, region, job role). You can select different data sources such as SCORM, quiz, face to face, courses, Learning Pathways or the learning data store.

Reports can be loaded instantly or scheduled, to automatically email to managers i.e. once per month.

Team Insights

Team Insights is a recent new release feature, offering real-time statistics and data metrics, sharing valuable insights from user activities. It provides a swift understanding of learner compliance levels, highlighting areas where organisational intervention may be beneficial. It provides a highly visual reporting method, meaning your L&D team can communicate compliance and ROI effectively to stakeholders.

Video platform

Single sign on access straight from the LMS to our Clear Lessons video platform. It contains 1500+ bite-size videos including topics such as leadership, fundraising, and volunteering.
